Please try your search again later.The Bose SL2 system is an accessory for all 5.1 Lifestyle and Acoustimass home entertainment systems that allows owners to enjoy a discrete 5.1 surround sound experience without running wires from the front of the room to the back of the room. The surround speakers are powered by and wired to the wireless receiver.Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Boywonder 3.0 out of 5 stars However, after 3 months I developed an issue with one speaker not functioning. It may have been in warranty, and I did not address it. That is my experience. Others may not have any issue whatsoever. This was ordered for a Bose V20 surround sound unit. Hope this review is helpful.Better than other systems I have tried in the past. No sound cut outs.We moved into a rental house not prewired for surround, and this saved me from trying to fish wires through walls and into the attic. The bonus is they perform flawlessly and I cant notice any difference between when I used wires or this system. They were easy to install right out of the box.<http://alga-gk.ru/upload/93-dodge-caravan-repair-manual.xml>

- **bose 40390 sl2 wireless surround link manual.**

The only downside is the price but at least they are a Bose quality product.Our new home we did not build so there was no wires in place to hook up our rear speakers to our Bose Lifestyle 35 System and in order to get the rear speakers hooked up it was going to require going over 3 doors and a fireplace with speaker wire. Now it could have been done but I am someone who just doesnt like to see wires where there shouldnt be wires. As I was considering going under the house to fish wires into the walls I remembered a email I received a couple of years ago from Bose talking about this new way to hook up your rear surround speakers with out having to run wires from the front of the room to the back. So I went to there website and saw the SL2 wireless surround link. This thing works great and is SO EASY to install. The transmitter and its receiver are 16 apart and there is no problem at all with them communicating with each other. I cant even tell that its not hard wired because the sound quality is the same as in my previous house. I cant express enough how thankful I am that I remembered that Bose made this product. It truly saved me a lot of work.The assembly was a breeze. I love the fact you can hide the transmitter and receiver out of sight and they still work. I live in an apartment and it is perfect for that. I didnt have to run speaker cables across my living room floor.Only downside, is venders that have them are aware of this and over charge for them and for this reason I purchased two sets as back ups.I am using an Acoustimass system. THIS addon system was the total solution to my problem. No construction or structural alterations necessary. Sound quality is exactly the same as when the rear channels were hard wired. I highly reccomend this to anyone in a similar situation. Made for Bose systems ONLY. It delivers the audio equivalent of a Bose wired 5.1channel home entertainment system.<http://metabolit-plus.ru/files/file/93-dodge-dakota-manual-pdf.xml>

If you want to surround yourself with sound not wires with a unified, stylish, and easy to setup wireless speaker link look no further you won't find a better solution than the Bose SL2. The SL2 package eliminates the need to run messy wiring from the back of your receiver to the rear speakers located across the room. It delivers the audio equivalent of a Bose wired 5.1 channel home entertainment system. Unobtrusive Design The small, sleek design of the SL2 enables discrete placement in your home theater room. Flexibility The SL2 offers the flexibility to place and then easily arrange the rear surround speakers. Backwards Compatible The SL2 can easily integrate into the Lifestyle and Acoustimass Systems, as well as older CDBased models of the Lifestyle and Acoustimass Systems. Easy Setup And setup is quick and easy with color-coded connections, connect the SL2 transmitter to your Lifestyle or Acoustimass system, and the receiver to your rear surround speakers, then plug both units into a wall outlet. Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History Not responsible for typographical or illustrative errors. Unplug this product from the wall outlet before cleaning. For Your Records Serial numbers are located on the bottom of the SL2 transmitter and the SL2 receiver. Now is a good time to find the serial numbers on the bottom of the SL2 transmitter and receiver. Copy them onto your product registration card and in the space provided on "For Your Records". The SL2 transmitter, which is labeled on the back, is also distinguished by the single RCA jack Figure 2. The SL2 receiver, also labeled on the back, has two RCA jacks. If both power supplies are connected and plugged in, the Status LEDs on both the SL2 transmitter and receiver light a solid green to indicate the two are in communication. If your speakers are part of an Acoustimass the bottom of the SL2 transmitter to Other Figure 6.

Please fill out the information section on the card and mail it to Bose. Failure to do so, however, will not affect your limited warranty rights. What you must do to obtain Limited Warranty Service 1. Return product with proof of purchase from an authorized Bose dealer directly to Bose Corporation. If you elect to return the product directly to Bose Corporation, the following. Exclusive remedy This Limited Warranty is fully transferable provided that the current owner furnishes the original proof of purchase from an authorized Bose dealer. The receiver and transmitter pair work off a 5.8 GHz frequency band and have an effective wireless range of up to 30 feet in the same room. The Receiver also act as an amplifier for your rear speakers. Compatibility The Bose SL2 Link is designed to work with all Bose 5.1 Lifestyle systems and all 5.1 channel Bose Acoustimass home entertainment systems. Transmitter The wireless Transmitter transmits audio by the way of radio frequencies to the wireless Receiver from the output of the surround speaker connection on back of your Bose Acoustimass Module. By using RF frequencies you can hide both units out of sight. The Transmitter comes supplied with a 6 audio cable which plugs into the back of the Transmitter and then into the back of your home theaters Bose Acoustimass Modules surround speaker outputs. The Transmitter will also have to be plugged into an AC outlet. The Transmitter features the following controls, connections and LED indicators. Controls All controls are located on the bottom of the Transmitter. Select Lifestyle when hooking up the Transmitter to a Bose Lifestyle system and select Other when hooking up the Transmitter to a Bose Acoustimass system. Connections All connections are located on the rear of the Transmitter. DC Power AC power jack connection for supplied AC power adapter to supply power to the Transmitter. Acoustimass Module Input 3.

5mm minijack connection used to connect the Transmitter to your Bose Acoustimass Module via the supplied minijack to RCA audio cable. LED Indicator The LED indicator is located on the rear of the Transmitter and it blinks green when power is supplied. Receiver The wireless Receiver receives audio from your Acoustimass Module through the wireless Transmitters 5.8GHz transmission and then sends the audio to your rear speakers through their connected cables. The Receiver also has a small builtin amplifier to amplify your rear speakers. The wireless Receiver is placed at the same end of the room as your Bose surround speakers. The Receiver should be placed 6.5 to 30 from the Transmitter. The Receiver connects to your surround speakers via the supplied two 20 lengths of

speaker wire and Jewel Cube adapters if needed. The Receiver will also need to be plugged into an AC outlet. The Receiver features the following connections and LED indicators. The Receiver has no controls. Problems with the transaction. Please contact me before you decide to leave a neutral or negative feedback. I will try my best to solve any genuine problems for you as soon as possible. THANK YOU

You are the light of the world. We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion. Use with a LIFESTYLE home entertainment system or Acoustimass module to get the most out of your surround sound system and hear the richness and depth of audio like never before. The Bose SL2 Wireless Surround Link is ideal for use with amplifiers that have a rating of up to 200 watts per channel. Amplified right and left audio signals are sent wirelessly to surround sound speakers at the back of the room with the help of the builtin small receiver and radio frequency transmitter. The ADAPTiQ audio calibration system clarifies sound quality to ensure you are getting the best audio possible. The 60Hz 60mA radio frequency transmissions make it possible to place the speaker almost anywhere.

Since it is not usually necessary to point the transmitter toward the receiver, you can place both units out of sight if you desire. I was able to connect my rear speakers wirelessly and safely no more wire yanking by my toddlers. But the device is really expensive compared to the other wireless options. The ability to use an AC outlet to connect my Bose System to the Big Screen indoors, us outdoor smokers do not miss one play in the Alabama Football Game or one lick of a Jimmy Buffett concert. This is an excellent Bose extension to avoid wire running across the room. So far, I have not felt any quality issue with the sound coming out of the surround satellite speakers. It has power saving mode when not in use. Verisign. It enables you to have rear surround speakers for your home theater system without having to run unsightly wires from your main system to the surround speakers. The SL2 system consists of a transmitter and a receiver and is designed to work with 5.1 surround Bose Lifestyle and Acoustimass systems. In this case however you are just connecting the wires up to the transmitter which is located right next to your primary Bose system. Your rear surround speakers plug into the receiver unit directly and you can set them up anywhere within about a thirty foot distance from the transmitter. The AL8 wireless solution operates in the 5.8GHZ band which means you could have a cordless phone in that range that might interfere but the Bose design seeks to minimize any potential interference to keep the sound pure without pops or hissing. The transmitter and receiver must plug in to a wall outlet, speaker wire is required to connect the transmitter to your system, and speaker wire is required to connect your rear speakers to the receiver. All of the connections are color coded which makes setup painless. The SL2 is one of, if not the best, wireless rear speaker solutions you will find in terms of performance.

The only downside is that it requires a Bose system so you'll have to look elsewhere if your home theater setup is not Bose. When playing a CD movie the sound only comes from. Posted by gmoore534 1 year ago Answers SL2 i need to replace my sl2 Bose, but its discounted what should I do Posted by uno102219 1 year ago Answers View 1 video for the. Bose SL2 below. Please try again Now I have a very expensive paperweight. Sorry, we failed to record your vote. Please try again I would recommend this to anyone that has a BOSE Home Theater system Sorry, we failed to record your vote. Please try again The Bose SL2 is exactly as advertised, the sender unit plugged straight into the Acoustimas Sub and linked up with the transceiver that connects to the rear speakers without any setup. Very satisfied with the sound quality and performance. Sorry, we failed to record your vote. Please try again This is a must if you do not want to run wires across the floor and do not want to do a renovation to hide the wires. Compared with the wired sounds, the wireless is not as sharp, to be expected. However, the sound is still greeeeat. Very easy to set up and our recommendation is to make sure both units face each other at the same level. We bought ours from one call and throughout the service was excellent. We dropped it by one star just because the sound was slightly tad less sharp than the wired version. Sorry, we failed to record your vote. Please try again. Something went wrong.

more information on the types of cookies we use and how to change your cookie settings. You want to savour the guitar solos and sweeping verses. You want to be in the middle of all the action, and the Bose Surround Speakers put you there.

Designed exclusively to pair with the Bose Soundbar 500 or the Bose Soundbar 700, these unobtrusive rear surround speakers provide sweeping sound that adds to your movies, sports and TV shows. Standing less than 10 cm high, the Bose Surround Speakers fit right in with sound that stands out. And the setup Simple. Two wireless receivers accompany the speakers to facilitate a wireless connection to the soundbar. Once connected, you have a premium acoustic setup to complement the powerful performance of the soundbar. Adding a bass module—like the Bose Bass Module 500 or the Bose Bass Module 700 —can complete the package for full, roomrocking sound. Both bass modules have a wireless range of 9 metres and fit nicely in any room. It's the difference between just hearing bass and feeling thunder. Why ponder so long Well couple of reasons mixed reviews from folks where some were of the opinion that there is no sound and others saying that it is just awesome; and couple that with the price tag, then you can begin to ponder! So, ok, bought it and have been using them for a good 6 months now after pairing them with my Bose SoundTouch 300, and we have been having an amazing time! We have actually managed to watch a lot of scifi movies again, just to realize what we have bought and how good sound can be. These speakers added that extra dimension to the sound of a TV and have brought out the best. Id say, when you get those kind of feelings or questions, then yes, you have got what you asked for! These speakers are small, easily blend with the stuff you might have in your shelves and get tuned to the room environment using the Bose tech of ADAPTiQ audio calibration. Worth every penny if you want the surround sound experience at home! People saying volume was an issue. I have these attached to my Bose Sound Bar 700 and they're loud enough.

However, the Bose Surround Speakers do require electrical power to power the wireless receiver and there is a speaker wire connecting the wireless receiver to the speaker itself. Are you sure to remove this product By continuing to browse or use this site, you are agreeing to our use of cookies. Please share your ZIP Code to find a nearby Best Buy to try out your next phone. Please share your ZIP Code to find a nearby Best Buy location By adding additional speakers to your soundbar and achieving 5.1 audio quality! Basically, the more channels or speakers you add, the higher quality the sound will be. As you can guess, a 5.1 channel uses a total of 5 audio channels plus a subwoofer. Finally, you dont need to leave home to get an amazing surround sound experience. The two rear speakers are connected to the wireless receiver module by wires. That way, you can become completely engulfed in whatever's happening on your TV. Here are the soundbars that can connect Some soundbars even come with a subwoofer ! Youll know that theyre connected once the blue indicator glows on the speakers. The soundbar also needs to be turned on. The red indicator on each speaker will turn off and start blinking blue. Hold down the button for 56 seconds until the "ID SET" message appears on your soundbar's display. Please read your soundbars user manual for specific instructions. Your speakers are now connected! You can purchase a separate speaker set if you want! Youll be able to enjoy surround sound on top of having an awesome soundbar. Youll need to set up the speakers manually, though. To do this, insert the gray plug into the gray jack on the wireless receiver. Then, insert the blue plug into the blue jack on the wireless receiver. Match the gray cable to the speaker with the gray label on its back, and match the blue cable to the speaker with the blue label. The LINK LED indicator blue LED on the wireless receiver will blink.

If your soundbar requires this, please see your user manual for instructions. Hold down the button for 56 seconds until the "ID SET" message appears on your soundbar's display. Please read your soundbars user manual for specific instructions. Your speakers are now connected! After all, a subwoofer is the 1 in 51! Some soundbars come with a subwoofer included, while others will require

you to purchase one separately. Either way, a subwoofer is a crucial part of a home theater system. It creates deep bass tones like rumbling sounds when something intense happens. It can also produce lowfrequency sounds you may not hear with a normal speaker. The two speakers must be connected to the module by the provided cable wires. Consult user manual for more complete information. Samsung is not responsible for any direct or indirect damages, Or Text HELP to 62913 Please contact us via Live Chat for a faster response.
