We have 3 Bostitch SB1664FN manuals available for free PDF download Original Instructions Manual, Operation And Maintenance Manual. The nailer was not designed for the contact type trigger. Please check the attached list or your parts breakdown you can search here to assure yours is on it. These are the same nails that are used in other Bostitch finish nailers SB1664FN, FN16250, and FN1664. To view a complete listing of the nails in this series please click here to visit our Bostitch website. See Updated Privacy Policy or Contact Us at 6275 Millcreek Drive, Mississauga ON, L5N 1L8 for more information. It also describes information tools available at eReplacementParts.com. Attached is a video that will help with your inquiry. Thank you. Can't remember the part name but it does leave a mark in the wood afterwards. I have to take all the nails out and reload it for it to work. I disconnect the air when I do this so not sure if it's an air issue or a feeding mechanism issue. Safety Pad. Don't know why Bostitch can't help on that. I was unable to locate one. Can someone tell me the proper steps to take the nailer apart to remove the jammed nails? What is the difference between a brad and a nail. Is a brad smaller? Thanks. That's why my original question asked if someone would give me the proper steps to remove it and get the nails out. I just didn't have the time it takes to get help on this, so I purchased a Rigid gun as a replacement. In fact it fires two nails when it fires at all. I have verified that the advance spring is not broken. Login to post Pull the magazine back. Load nails in the stationary part of the magazine with the heads of the nails at the top of the magazine. Push the sliding section of the magazine back into place making sure it latches. Air supply is OK. Plunges but will not fire. If you have the manual look for the breakdown diagram and check that everything is in place on the gun. If not go here and you can get manual. <http://cnokorea.com/userfiles/dell-1600n-printer-user-manual.xml>

Xterrarick 1.0 out of 5 stars My issue was with the seller and the description of the item. Order i placed stated it was for 3 replacement pieces however my delivery was only 1 piece. I contacted the seller whom stated amazon's description was incorrect offer was for only one piece instead of 3 replacements as stated. I see the item is still listed as three pieces which is misleading in the description and I personally feel deceived. Would not suggest purchasing from this seller. My order arrived quickly and once they warmed up to room temp slid on pretty easily. They fit my pneumatic stapler. They work fine. Not much else can be said. This one fits nicely and with three pack I now have extras. The company quickly shipped my small item for a small price. My order was treated the same as if it were a major order. Fit my product exactly. Repair your with Bostitch parts to economically fix SB1664FN finish nailer tools. Learn more. We your interest and respect your privacy. Ask us how. Does it leak out of the Trigger all of the time, or only when actuated MTR It is an internal leak in the head that only exits when the trigger valve is opened which creates a leak path. Note only the outer ring can cause this. The other rings on the head valve would cause an exhaust leak. If the oring has not been changed, this should be number one choice. Even if not worn, they can shrink over time if the unit is not used. Hope this helps! MTR.
